Mr. Todd Thompson
Assoc. Water Resource
Control Engineer

Re: Biosolids

Dear Mr. Thompson:

We don't need the dumping of more biosolids up here in our Antelope Valley. None should have ever been dumped in the first place. Los Angeles County thinks we are nothing but a dumping ground for whatever they don't want down below or anywhere else.

Human waste contains deadly cryptosporidium and cryptococcus. (Crypto: Bv. for hidden, secret.)

The spores are carried by the wind, and we have winds for long stretches of time. The idiots who want to bring this stuff here don't give one thought as to the danger we will be facing - they don't care. And, since you are a Water Resource Control Engineer, you should realize more than anyone else what this could do to our water supply - so speak up for us and forbid this whole idea.

There are so many minority families here, and they, I'm sure, have no idea what "biosolids" even mean. They probably think it's something "fine" to be spread around here. How would they know?

Keep it out of here. Mr. Thompson, I implore you.

Sincerely,
J. H. Karaman
(a 43-year Kanarukite!)
